time of reception. In other words, it may be known that a particular channel always and only transmits business data, while another channel always and only transmits sports statistics. As a result, once the detector 16 determines that data is received, the processor 18 can reference the template to determine which type of data corresponds to the tuned channel.

Please amend the paragraph beginning at page 11, line 10 as follows:

Sub B2

A2

Also, if the data type is determined to be new, the processor 18 executes data guide software to generate or update a menu 32 containing that data type. [A] The operator interface module 21 can display the menu 32 at any time the user selects. The operator interface module 21 can be in the form of, for example, a computer monitor, a television screen, a liquid crystal display screen of a cellular telephone or personal digital assistant, or the like. The menu 32 could be displayed on a designated channel to which the user could tune when desired. Using a peripheral input device (not shown) associated with the operator interface module 21, such as a mouse, trackball, keyboard, remote control, or touch screen, a user can scroll through the displayed menu 32
